Digital breaths: The benefits of bioengineering

Professor Merryn Tawhai

Director MedTech CoRE
& Dep. Director Auckland Bioengineering Institute

An aging population and increase in people living with chronic disease calls for new approaches to reduce healthcare costs and improve patient outcomes. Recent advances in imaging, sensor, and communications technologies, combined with innovative bioengineering approaches, has the potential to revolutionise healthcare.

Does New Zealand have the capability to become a world leader in this industry?

Proudly presented in partnership with the Auckland Bioengineering Institute of the University of Auckland and the Medical Technologies Centre of Research Excellence.
